SEE Well: Using Science and Engineering as a Public Good
Mini Research Symposium
24 March 2017
1pm-4pm
220 New Classroom Building
(Corner of West Campus Drive and Perry Street)

The Virginia Tech Institute for Critical Technology and Applied Science (ICTAS)’s Center for Science and Engineering of the Exposome (SEE) is excited to announce their first mini research symposium. SEE is dedicated to establishing a fundamental understanding of the relationships between engineering design and the human exposome. The center embraces the VT-shaped student and an interdisciplinary approach that spans environmental engineering, microbiology, chemistry, nanotechnology, and aerosol science while emphasizing ethical practices for the public good. SEE recently played a fundamental role in uncovering the Flint Water Crisis.

The theme for the research symposium is SEE Well: Using Science and Engineering as a Public Good. The symposium will consist of 15-minute oral presentations, and SEE invites submission of abstracts from students and faculty across all disciplines at Virginia Tech. This symposium is open to the entire Virginia Tech community at no cost.

Please submit abstracts to aprussin@vt.edu by 24 February 2017 at 5PM. The registration deadline for the symposium is 10 March 2017 at 5PM and can be done at https://virginiatech.qualtrics.com/SE/?SID=SV_aabk7XU0qrT075P.
